Potfree & TrimTroFF Plants

Helping To Reduce Plastic Waste in Our Industry!

Details of our Potfree Plants

Potfree TrimTroFF plants are grown in a pleated fabric across a tray. The plants develop their roots along the channel making use of all the available soil. The root branches naturally, often producing a more fibrous structure. The roots will penetrate the fabric and grow towards the bottom of the tray. When plants are removed from the tray and fabric the roots get pruned which helps with further establishment.

The root zone does not become compacted and bound together unlike plants grown in plugs or pots. Some plants such as Cytisus and Pittosporums have a problem with root spiralling, this is prevented with the potfree system.

As these plants share the volume of compost within the channels, water, nutrients and bio flora are shared by each plant. Soil microbes are becoming of great interest to us, our Potfree system helps to encourage this activity. Plant nutrients and beneficial bacteria all go towards a healthier plant. In our more established trays we are seeing a steady build-up of composting worms which produce cast that are a great benefit to plants.

We use 2 sizes of trays 30cm x 55cm Danish trolley size and a 40cmx 60cm Dutch size tray. The size of the plant is determined by how the tray is divided up.

We have 6 sizes at the moment 2 in the seed tray and 4 in the Dutch tray. They are identified as follows:-

Seed Tray

TrimTroFF 8 (PF8)	45 plants in tray (5 x 9)
TrimTroFF 10 (PF10)	32 plants in tray (4 x 8)

Dutch Tray	TrimTroFF 12 (PF12)	35 Plants in tray (5x7)
	TrimTroFF 15 (PF15)	24 plants in tray (4X6)
	TrimTroFF 20 (PF20)	15 plants in tray (3x5)
	TrimTroFF 30 (PF30)	6 plants in tray (2x3)

When plants are sold they are divided up and placed in carry trays or cardboard boxes for despatch. Quantities sold can only be in multiples of 50

The range of this product is very limited at present. Please refer to our availability list.
